

Assignment -4

Docker and Kubernetes

Assignment Date	2 November 2022
Student Name	Raghunandhan VR
Student Roll Number	722819205030
Maximum Marks	2 Marks

1. Pull an image from docker hub and run it in docker Playground

The screenshot is divided into two main horizontal sections. The top section shows the Docker Hub repository page for `uifd/ui-for-docker`. The page includes the repository name, a description stating it is deprecated and to use Portainer instead, and a 'Pulls 10M+' badge. A 'Docker Pull Command' box displays `docker pull uifd/ui-for-docker`. The bottom section shows the Docker Playground interface. On the left, there's a sidebar with a timer at 03:42:30, a 'CLOSE SESSION' button, and an 'Instances' list showing one instance named 'node1' at IP 192.168.0.13. The main area displays the instance details for 'cd9an2u3_cd9av060qau0008hbjs0', including its IP (192.168.0.13), memory, CPU, and an SSH command. Below this, a terminal window shows the execution of `docker pull uifd/ui-for-docker`, which successfully pulls the latest image. The terminal output includes the digest `sha256:fe371ff5a69549269b24073a5ab1244dd4c0b834cbadF24487052150b1cb749` and the status 'Downloaded newer image for uifd/ui-for-docker:latest'. The terminal prompt is `root@192.168.0.13 ~`.
